Commissioner of Patents and Trademarks

Art Unit: 2685

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1-5,9,12,13,15-18,22,25,26,28-31,38,39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mitts et al. (U. S. Patent Number 5,896,373) in view of Woest et al. (U. S. Patent Number 5,243,595).

Regarding claims 1-5,9,12,13,15-18,22,25,26,28-31,38,39 Mitts et al. discloses essentially all the claimed invention as set fourth in the instant application, further Mitts et al. discloses method for executing handover in a radio extension of an atm network. In addition Mitts et al. discloses a wireless sending a message from a BSC (col. 5 line3-29), BSC controlling a cell to one customer equipment sending a message from the cell to a point associated BSC, however Mitts et al. fail to specifically disclose at least first access point and breaks up packets in message into smaller packets.

In the same field of endeavor of packaging systems for data transfer, Woest et al. discloses a combined connectionless and connection-oriented network control system. In addition Woest et al. discloses destination points (which reads on access points). Woest et al. further discloses in (column 45 lines 19-22), the breaks up packets in message into smaller packets.

Art Unit: 2685

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to improve Mitts et al by modifying method for executing handover in a radio extension of an atm network with the use of breaks up packets in message into smaller packets, as taught by Woest et al. for the purpose a proper transmission.

2. Claims 6-11,14,19,-21,23,24,27,32-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mitts et al. in view of Woest et al. and further in view of Norman et al. (U. S Patent Number 6,049,533).

Regarding claims 6,19,23,24,32,36,37, Mitts et al. in view of Woest et al. discloses everything claimed, as applied above (see claim 1) additionally, however, Mitts et al. in view of Woest et al. fails to specifically disclose the use of a first access point is located within a cell, and second access point is located outside the cell.

In the same field of endeavor of packaging systems for data transfer, Norman et al. discloses a network communication system with information rerouting capabilities. In addition Norman et al. discloses the use of a first access point (42), is located within a cell (44), and second access point (AP2) is located outside the cell as exhibited in figure 2, and disclosed in column 7 lines 1-7.

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to improve Mitts et al by modifying method for executing handover in a radio extension of an atm network with the use of a first access point is located within a cell, and second access point is located outside the cell, as taught by Norman et al. for the purpose of reducing cellular traffic.

Art Unit: 2685

Regarding claims 7-9,20,21,33-35 Mitts et al. in view of Woest et al. discloses everything claimed, as applied above (see claim 1) additionally, however, Mitts et al. in view of Woest et al. fails to specifically disclose the use of sending from a source is at lease partially wireless.

In the same field of endeavor of packaging systems for data transfer, Norman et al. discloses a network communication system with information rerouting capabilities. In addition Norman et al. discloses the use of sending from a source is at lease partially wireless and disclosed in column 1 lines 53-55.

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to improve Mitts et al by modifying method for executing handover in a radio extension of an atm network with the use of sending from a source is at lease partially wireless, as taught by Norman et al. for the purpose of reducing cellular traffic.

Regarding claims 10,11, Mitts et al. in view of Woest et al. discloses everything claimed, as applied above (see claim 1) additionally, however, Mitts et al in view of Woest et al. fails to specifically disclose the use of a first access point is located within a cell, and second access point is located outside the cell.

In the same field of endeavor of packaging systems for data transfer, Norman et al. discloses a network communication system with information rerouting capabilities. In addition Norman et al. discloses the use of a first access point (42), is located within a cell (44), and second access point (AP2) is located outside the cell as exhibited in figure 2, and disclosed in column 7 lines 1-7.

Art Unit: 2685

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to improve Mitts et al by modifying method for executing handover in a radio extension of an atm network with the use of a first access point is located within a cell, and second access point is located outside the cell, as taught by Norman et al. for the purpose of reducing cellular traffic.

Regarding claims 14, 27, Mitts et al. in view of Woest et al. discloses everything claimed, as applied above (see claim 1) additionally, however Mitts et al in view of Woest et al. fails to specifically disclose the use of wireless communication equipment including an antenna a transmitter and a receiver and a processor that controls the equipment, and memory.

In the same field of endeavor of packaging systems for data transfer, Norman et al. discloses a network communication system with information rerouting capabilities. In addition Norman et al. discloses the use of a wireless communication equipment (MU) including an antenna (48), a transmitter and a receiver (80,82), and a processor (70) and memory (76) that controls the equipment as exhibited in figure 4, and disclosed in column 8 lines 60-67.

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to improve Mitts et al by modifying method for executing handover in a radio extension of an atm network with the use of a first access point is located within a cell, and second access point is located outside the cell, as taught by Norman et al. for the purpose of reducing cellular traffic.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sheila B. Smith whose telephone number is (703)305-0104. The examiner can normally be reached on Monday-Thursday 8:00 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Urban can be reached on 703-308-5318. The fax phone numbers for the organization where this application or proceeding is assigned are (703)308-6306 for regular communications and (703)308-6296 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)305-4700.
